

LHC-TP/S „ThermoPremium“ with Glass Sliding Doors

The Ultimate Reptile Husbandry!

Cages completely made from synthetic material with glass sliding doors.

Light-weight and ecofriendly plastic

High stability

Very good heat insulation – saves heating costs!

Hygienic

UV resistant

No upwelling, no mould, no rot!

The applied material comes from a newly developed PVC panel which is made eco-friendly mainly from regenerated material.

Our new model LHC-TP/S is the consistent further development of our LHC model. A new type of cages with some new and outstanding features.

Processing, material quality and functionality at the highest stage – this means a matter of course for us!

We have integrated an upper-level shaft which allows all cables etc. to be mounted and routed conveniently and invisibly to the back side.

Ventilation takes place via vents in the top panel. Even when cages are stacked the air can flow freely to the back side. Fresh air is sucked in via vents below the glass sliding doors. The back panel remains untouched for your individual configuration.

The breeding of fancy colour morphs has become more and more popular during the last years. Our LHC series offers the best premises to the ambitious breeder to secure hygienic, neat, and humane accomodation. We offer state-of-the-art control and heating devices!

We also offer you the option for an integrated shelf. Shelves like these create additional surface and add to the possibilities for movement. Plus they mean ideal large areas for “sunbathing” e.g. under a heat panel. If desired the shelves can be partially heated themselves (see below). See column “Shelves” for prices.

We deliver LHC-TP/S completely mounted – including glass sliding doors (excluding technical devices)

Shipping takes place only via hauliers. Please keep the maximum capacity of a pallet in mind as indicated. Depending on country/distance the delivery charges differ enormously. Please inquire.
